Q1 Minimum Spanning Tree - Kruskal's Algorithm 20 marks

Write pseudocode for constructing an MST using Kruskal's Algorithm. A city planning department needs to connect multiple zones with underground fiber-optic cables. Each zone is represented as a vertex, and possible cable connections between zones are represented as edges with installation costs (weights).

Constraints:

- All zones must be connected
- Total installation cost must be minimized
- No redundant connections (no cycles) allowed
- The network must remain fully connected

Your Answer

START
Input number of vertices and edges
input all edges with their costs
sort all edges in increasing order of cost
MST = empty
Total Cost = 0
